

Allied Universal MaRC Traditional Alarm Monitoring

UL-Listed 24/7 Alarm Monitoring Services

Allied Universal's alarm monitoring and intrusion services provide peace of mind 24/7. Through our Monitoring and Response Center (MaRC)—designated a Five Diamond monitoring center by The Monitoring Association—Allied Universal processes a variety of alert types and provides end-to-end proactive solutions to enhance situational awareness and mitigate risk, while reducing operational cost.

As part of our suite of integrated security solutions, Allied Universal's MaRC provides comprehensive alarm and intrusion detection services. MaRC specialists custom design fire and burglar alarm (intrusion detection) systems that integrate into the response protocols processed through the monitoring center to meet your specific needs. We also install, service, support, test and monitor alarm systems. These services can be added to your existing security program as a force-multiplier or installed independently to help mitigate risk and reduce cost by:

- Deterring break-ins and burglaries
- Reducing theft
- Preventing property loss and damage
- Providing a safer and more secure business environment

Utilizing a robust automation platform capable of accepting many alert and signal types from various systems, alarm monitoring is provided by a team of highly trained security intervention specialists 24/7. The MaRC is a UL 827 Central Station, meeting specific standards of quality for proper construction, power continuity, equipment and staffing. This ensures all your security and fire and life safety systems are closely monitored 24 hours a day by qualified professionals and equipment.

Key Features

- Fire alarm system monitoring
- Intrusion alarm/verification
- Voice (audio) alarm verification
- Customer-designed event response protocols
- State-of-the-art equipment: detectors, sensors, control panels
